Board Game Cafe Database
Individual Project

1. **Project Selection**
    a. **Select a Mini World**

Board Game Cafe

2. **System Design Requirements**
    a. **Documentation of process**

References used: https://www.hexnyc.com/, https://uncommonsnyc.com/about/

Tables & Columns:

Boardgames
- Boardgame_id, name, retail_price, genre, min_player_count, max_player_count, backup_copies_qty, playtime_mins

Customers
- Customer_id, name, email, phone_number, member_tier

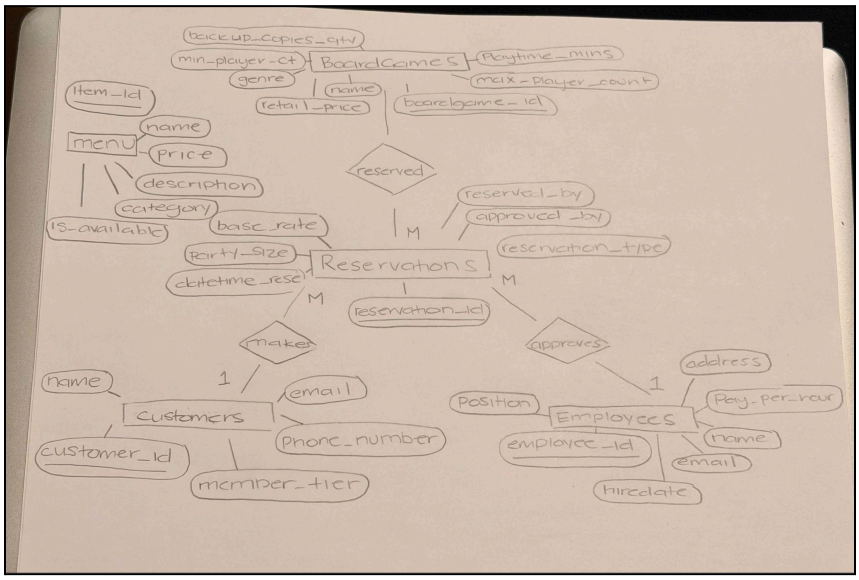

Employees
- Employee_id, position, pay_per_hour, name, email, address, hiredate

Menu
- Item_id, name, price, description, is_available, category

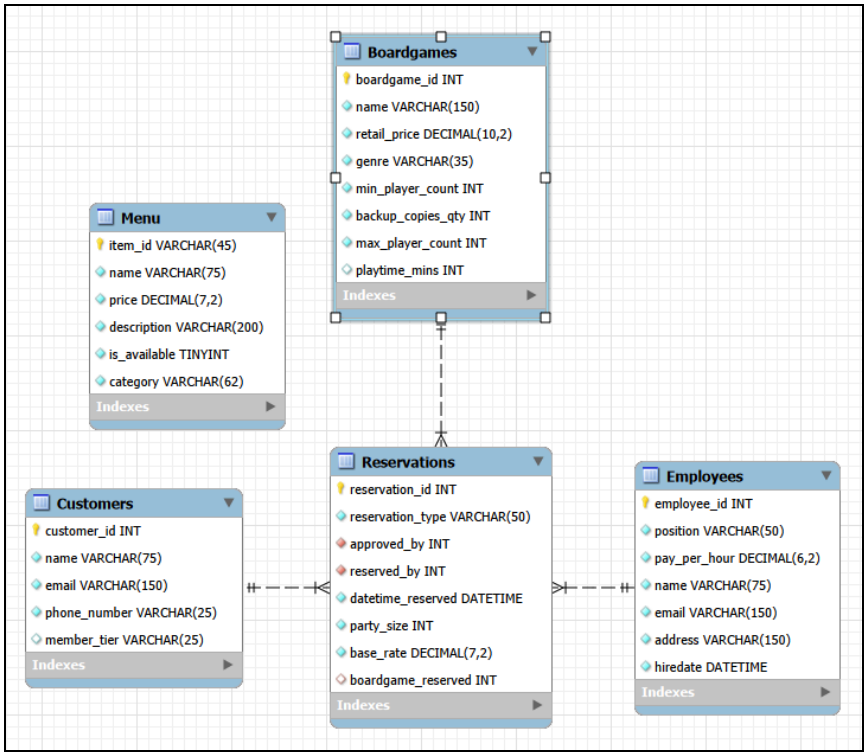

Reservations
- Reservation_id, reservation_type, approved_by, reserved_by, datetime_reserved, party_size, base_rate

For my thought process, I once took a class on making boardgames so I had a general idea on how to make this database. I also recently went to a pc cafe that just opened up in nyc, they told us about the base rate for the rooms and how long we would have in the room. Using this prior knowledge I developed the database based on my personal experience. I know there are boardgame cafes in NYC so I searched up their website and that's where I got the idea for the reservations table. The rest of the tables were kind of self explanatory in order to run a business in general.

3. **Entity-relationship (ER) Diagrams**
    a. Chen Style ER Diagram

    b. UML ER Diagram

4. Database Creation
